mirrorstats Overview

mirrorstats is a J script that queries the SQLite mirror.db database file built by MirrorXref.

mirror.db cross references local image files with online https://conceptcontrol.smugmug.com/ versions. Local images are catalogued in ThumbsPlus SQLite databases. mirror.db matches local ThumbsPlus image and path keys with online keys.

mirrorstats Interface

```
NotDivisible [7] albums with image counts that are not divisible by 3 and 5
albdist      [8] all mean album distances km from position (x)
fsd          [14] fetch sqlite dictionary array
fst          [14] fetch sqlite reads table
meanalbdist  [15] mean km distance of geotagged album images from (x)
```

Using mirrorstats

mirrorstats is typically used from the Jupyter notebook Mirror SmugMug Statistics.ipynb.

mirror.db Schema

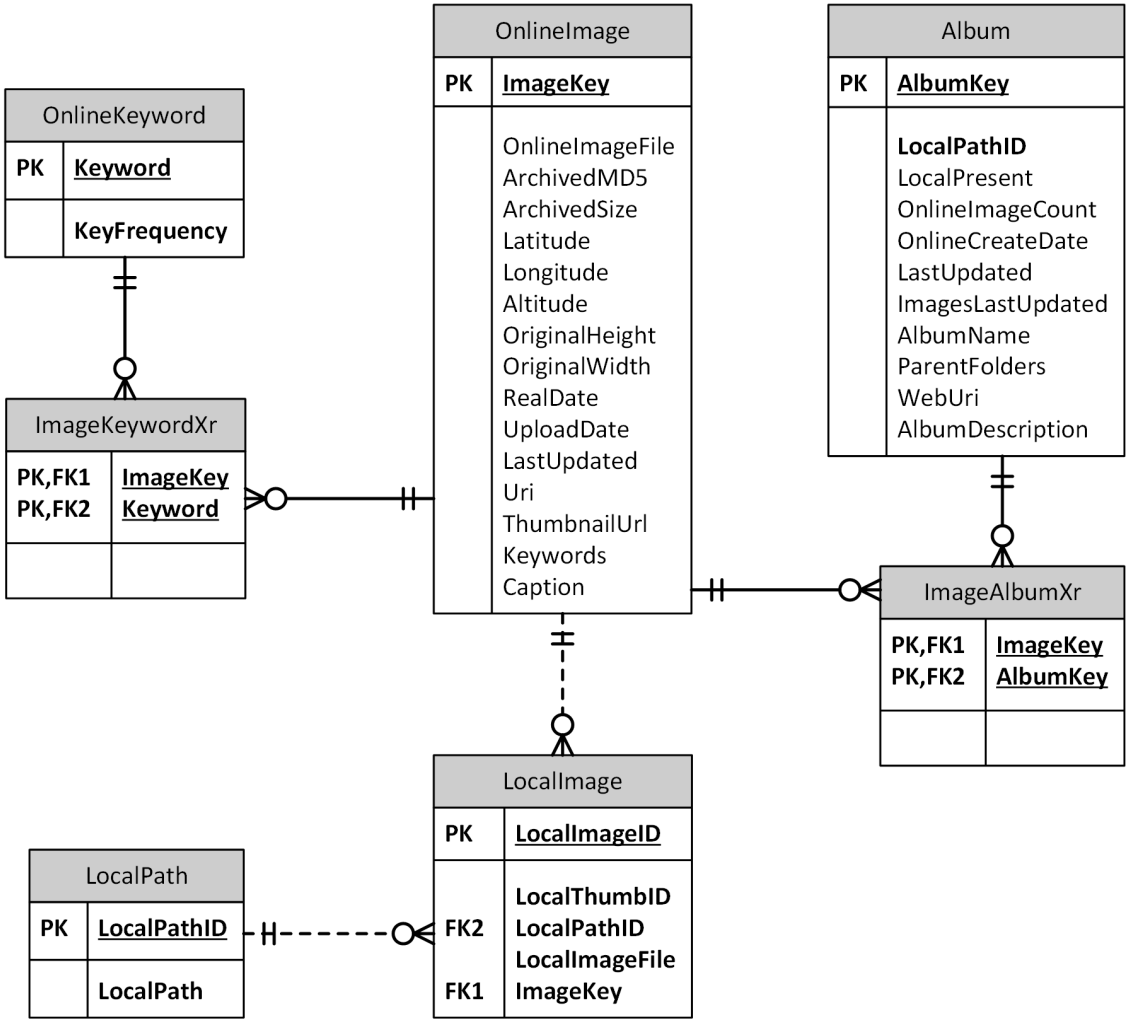

Figure 1: `mirror.db` schema.

mirrorstats Source Code

```
NB.*mirrorstats s-- utils for querying local SmugMug mirror_db metadata.
NB.
NB. verbatim:
NB.
NB. interface word(s):
NB. ------------------------------------------------------------------------
NB.  NotDivisible - albums with image counts that are not divisible by 3 and 5
NB.  albdist      - all mean album distances km from position (x)
NB.  fsd          - fetch sqlite dictionary array
NB.  fst          - fetch sqlite reads table
NB.  meanalbdist  - mean km distance of geotagged album images from (x)
NB.
NB. created: 2022jul07
NB. ------------------------------------------------------------------------

require 'data/sqlite'

coclass 'mirrorstats'

NB.*dependents
NB. (*)=: AlbumImageCount_sql GeotaggedAlbumImages_sql
NB.*enddependents

NB. NOTE: the j sqlite addon is fussy about how sql is formatted.
```

```
NB. Running standard sql pretty printers or indenting sql in your
NB. favorite style is likely to produce code that doesn't work.

AlbumImageCount_sql=:  (0 : 0)

NotDivisible=: 3 : 0

NB.*NotDivisible v-- albums with image counts that are not
NB. divisible by 3 and 5.
NB.
NB. This verb finds albums with image counts that are not
NB. divisibe by 3 and 5. This weird requirement was motivated by
NB. how the SmugMug iPhone App displays galleries. It breaks the
NB. images into rows of three or five. I don't like incomplete
NB. terminal rows.
