eucgvuts Overview

eucgvuts is an ad-hoc collection of J words that troll Euclid *Elements* references. The jupyter notebook

https://github.com/bakerjd99/jacks/blob/master/eucgvuts/eucgvuts_notebook.ipynb

shows how to get started.

eucgvuts Interface

```
eucjoycebkdeps [17] justifications from Joyce book html files
eucjoycecncts  [18] format Joyce node connections
eucjoycehtml   [20] html from David Joyce's online Elements
eucjoycetabs   [21] extract dependency tables from Joyce html
eucpropback    [24] generate reverse proposition digraph
eucsixbookdeps [26] justifications from Euclid books I-VI
eucsortBgv     [26] second sort and format euclid book digraphs
gvclustoff     [32] dot code marked cluster(s) off
gvcluston      [33] dot code marked cluster(s) on
```

eucgvuts Algorithm Notes

Most of the code in eucgvuts deals with parsing web page data from:

https://mathcs.clarku.edu/~djoyce/elements/aboutText.html

For more information read the blog post:

https://analyzethedatanotthedrivel.org/2023/06/28/j-graphvizs-euclids-elements/

Finally, all the code, documentation, test cases, and so forth associated with `eucgvuts` is in the JOD `futs` dictionary. The repository:

https://github.com/bakerjd99/joddumps

describes how to install JOD and set up dictionaries. Once `futs` is available you can review the words in `eucgvuts` with:

```
load 'general/jod'
od ;:'futs utils'
hg 'eucgvuts'
```

eucgvuts Source Code

```
NB.*eucgvuts s-- various Euclid graphviz digraph utils.
NB.
NB. verbatim: interface word(s):
NB. ------------------------------------------------------------------------
NB.  eucjoycebkdeps - justifications from Joyce book html files
NB.  eucjoycecncts  - format Joyce node connections
NB.  eucjoycehtml   - html from David Joyce's online Elements
NB.  eucjoycetabs   - extract dependency tables from Joyce html
NB.  eucpropback    - generate reverse proposition digraph
NB.  eucsixbookdeps - justifications from Euclid books I-VI
NB.  eucsortBgv     - second sort and format euclid book digraphs
NB.  gvclustoff     - dot code marked cluster(s) off
NB.  gvcluston      - dot code marked cluster(s) on
NB.
