jodliterate Overview

jodliterate is a J utility script that generates [literate](#) documents directly from [JOD dictionary](#) groups.

See the following for details:

1. [Using jodliterate notebook](https://github.com/bakerjd99/jacks/blob/master/jodliterate/Using%20jodliterate.ipynb). <https://github.com/bakerjd99/jacks/blob/master/jodliterate/Using%20jodliterate.ipynb>
2. [Using jodliterate PDF](https://github.com/bakerjd99/jacks/blob/master/jodliterate/UsingJodliterate.pdf). <https://github.com/bakerjd99/jacks/blob/master/jodliterate/UsingJodliterate.pdf>

jodliterate Interface

THISPANDOC	[24]	<i>full pandoc path - use (pandoc) if on shell path</i>
formifacetex	[32]	<i>formats hyperlinked and highlighted interface words</i>
grplit	[37]	<i>make latex for group (y)</i>
ifacesection	[40]	<i>interface section summary string</i>
ifc	[41]	<i>format interface comment text</i>
setjodliterate	[57]	<i>prepare LaTeX processing - sets out directory writes preamble</i>
wordlit	[61]	<i>make latex from word list (y)</i>

jodliterate and JOD

jodliterate makes some assumptions about the J code and document text it processes. It assumes:

1. All source code is stored in JOD dictionaries.
2. jodliterate document fragments are either:

- Markdown group long documents: 2 9 disp 'groupname'
- L^AT_EX suffixed macros: 4 disp 'groupname', '_oview_tex'

Running jodliterate

jodliterate runs on Windows, Linux and Mac versions of J.¹

To use jodliterate you must:

1. Install JOD. [JOD](#) is a J addon. It is usually installed with [pacman](#).
2. Install JODSOURCE. [JODSOURCE](#) is also a J addon. Install it with [pacman](#). It contains the JOD dictionaries required to build JOD. JODSOURCE also contains jodliterate.
3. Install a current version of [pandoc](#). pandoc version 2.9.1.1 and beyond supports J syntax highlighting. Prior versions required modification. The following blog posts provide more information:
 - (a) [More J Pandoc Syntax HighLighting](https://analyzethedatanotthedrive1.org/2020/02/19/more-j-pandoc-syntax-highlighting/) <https://analyzethedatanotthedrive1.org/2020/02/19/more-j-pandoc-syntax-highlighting/>
 - (b) [Pandoc based J Syntax Highlighting](https://analyzethedatanotthedrive1.org/2012/09/20/pandoc-based-j-syntax-highlighting/) <https://analyzethedatanotthedrive1.org/2012/09/20/pandoc-based-j-syntax-highlighting/>
 - (c) [Semi-Literate JOD](https://analyzethedatanotthedrive1.org/2012/10/01/semi-literate-jod/). <https://analyzethedatanotthedrive1.org/2012/10/01/semi-literate-jod/>
4. Build jodliterate. jodliterate is a J group. JOD makes J scripts from groups. To make jodliterate do:

```
require 'general/jod'
od ;:'joddev jod utils' [ 3 od ''
mls 'jodliterate'
```

¹jodliterate will run on J 8.01 and beyond.

- Open the JOD dictionaries containing the group you want to document.

```
od ;:'joddev jod utils' [ 3 od ''
```

- Load jodliterate. After making jodliterate it can be loaded like any J script.

```
load 'jodliterate'
```

- Set a working directory. jodliterate generates L^AT_EX files. All such files are written to the directory specified by setjodliterate.

```
setjodliterate '' NB. current JOD put dictionary document directory
```

```
setjodliterate 'c:\temp' NB. windows
```

```
setjodliterate '/home/john/temp' NB. linux
```

- Set optional author(s) with dyadic setjodliterate.

```
'Batman' setjodliterate 'c:\batcave' NB. set LaTeX author(s) text and directory
```

- Run grplit on the group you want to document. grplit generates L^AT_EX files in the working directory. The root L^AT_EX file is given the group name.

```
grplit 'jodliterate' NB. makes jodliterate.tex
```

- Use L^AT_EX to compile the files generated by grplit.

A batch bat script is written to the setjodliterate directory that shows the sequence of L^AT_EX compilation commands. Files may be processed with pdf_latex, xel_atex or lua_latex. Your choice will be dictated by the presence of Unicode characters. For more details see the preamble file JODLiteratePreamble.tex in the working directory.

There are some \LaTeX settings you may want to adjust.

1. Edit `JODLiteratePreamble.tex` to change the number of index columns. The default is three but this may result in very long names running together. To decrease or increase index columns change:

```
\begin{multicols}{3}[\section*{\indexname}]
```

2. `jodliterate` wraps long source code lines. Wrapping is controlled by `WRAPLIMIT`. The default is 110 characters. Change this value if you change font or page size. Wrapped lines are preceded with the string `WRAPLEAD` with default `>.>`.

jodliterate Source Code

```
NB.*jodliterate s-- generates literate source code documents directly from JOD groups.
NB.
NB. verbatim: see the following blog posts and github files
NB.
NB. https://analyzethedatanotthedrivel.org/2012/10/01/semi-literate-jod/
NB. https://analyzethedatanotthedrivel.org/2020/02/19/more-j-pandoc-syntax-highlighting/
NB. https://github.com/bakerjd99/jacks/blob/master/jodliterate/UsingJodliterate.pdf
NB. https://github.com/bakerjd99/jacks/blob/master/jodliterate/Using%20jodliterate.ipynb
NB.
NB. interface word(s):
NB. -----
NB.  THISPANDOC      - full pandoc path - use (pandoc) if on shell path
NB.  formifacetex    - formats hyperlinked and highlighted interface words
NB.  grplit          - make latex for group (y)
NB.  ifacesection    - interface section summary string
NB.  ifc             - format interface comment text
NB.  setjodliterate  - prepare LaTeX processing - sets out directory writes preamble
NB.  wordlit         - make latex from word list (y)
NB.
NB. author:  John D. Baker
NB. created: 2012oct01
NB. -----
NB. 12oct03 (x) grplit argument added to suppress root tex overwrites
NB. 12oct04 group IFACEWORDSgroupname hyperlinked
NB. 12oct05 replaced ;: parsing with (wfl) - handles bad j code
```

NB. 12oct08 added error handling - replaced (write) with (writeas)
NB. 12oct11 adjusted LaTeX preamble - changing monofonts
NB. 12oct12 added (sbtokens) - useful for analyzing code text
NB. 12oct17 added (wrapvrb) - long source lines now wrapped
NB. 13dec29 added to (jacks) GitHub repository
NB. 20may07 adjusted word formation (wfl) for J 9.01
NB. 20may08 updated for current (pandoc) versions
NB. 20jun07 added (formifacetest) to interface words
NB. 20nov01 added graphics and inclusions subdirectory to preamble
NB. 20nov01 \begin{document} moved to root file for OverLeaf.com
NB. 20nov04 (setjodliterate) cleaner script, author(s), email added

```
coclass 'ajodliterate'  
coinset 'ijod'
```

*NB.*dependents*
