gpxutils Overview

gpxutils is a J script that that formats Garmin style waypoint GPX files from CSV files and the SmugMug Sqlite mirror.db database. The resulting GPX files can be loaded into the Motion-GPS iPhone app and other GPS devices that import GPX data...

To run gpxutils inspect interface word comments.

gpxutils is generated from JOD dictionaries gps and utils

```
NB. open JOD dictionaries and generate gpxutils script
load 'general/jod'
od ;:'gps utils'
mls 'gpxutils'
```

A generated gpxutils script and sample mirror.db database are here:

- https://github.com/bakerjd99/jacks/blob/master/geotagged/gpxutils.ijs
- https://github.com/bakerjd99/smugpyter/blob/master/testdata/mirror.zip/mirror.db

gpxutils Interface

```
allrecent [5] all recent images from last waypoint generation
gpxfrmirror [11] extracts geotagged images from mirror_db and generates gpx
gpxfrpoicsv [12] converts poi csv files to gpx
gpxfrrecent [14] gpx from recent waypoints
```

gpxutils Source Code

```
\it NB.*gpxutils s-- generate \it gpx waypoint files from various
NB. sources.
NB.
NB. This group formats Garmin style waypoint qpx files from CSV
NB. files and my SmuqMuq sqlite mirror database. The resulting
NB. gpx files can be loaded into the Motion-GPS iPhone app and
NB. other GPS devices that import gpx data.
NB.
NB. verbatim: interface words
NB.
NB. allrecent - all recent images from last waypoint generation
NB. qpxfrmirror - extracts geotagged images from mirror db and generates qpx
NB. qpxfrpoicsv - converts poi csv files to qpx
NB. gpxfrrecent - gpx from recent waypoints
NB.
NB. created: 2019Dec11
NB. changes: -----
